Plot Averages:			203.4	26.1				190.2	\$621

Standability Ratings: 7=Excellent, 1=Poor

Standard Deviation = 14.5

Comments:

9383 - 9444 - 7811 - 8811 - 8812 - 9812 all had some ear mold, with 9812 being the most affected. Very good yields considering the difficult spring and dry, cool summer.

\$/Acre: Assumes \$3.50/bu. and a drying cost of \$.04/point of moisture down to 15.0%. No tech fee considerations made.
